

Worksheet Connect Description

Worksheet Connect is designed to allow teachers to guide a class full of students through a series of math worksheets on a specific math topic.

Features of the app:

Dashboard

Shows a visual representation of the whole class's progress. You can hover over individual student names to see how many worksheets they have passed, and clicking on a student name will take you directly to the scores for that student.

Start Practice

Tells you what worksheets each student needs to practice and provides a link to print all the worksheets you need for a specific practice session.

Enter Scores

Entering scores is what will allow you to see student progress in the dashboard and share those results with parents. When you record a score, you have option to enter a comment... This will be included with the email sent to the student's parent.

Share Results

Sending a summary of the class progress along with the specific scores for students' parents is a great way to encourage at-home practice. This allows parents to see how their student is doing compared to the overall class. There is an option to enter a comment that will appear in every parent's email.

Settings

Use this area to manage students and classes, assignments, reminders and your user profile.
